Professional Summary

I am an IT professional who helps organizations managing technical needs with security in mind, I possess proven foundation in information security, having utilised a blend of technical and analytical skills to conduct IT audits, technology risk assessments and Cyber governance development. My journey in the IT industry is driven by a genuine curiosity to understand and mitigate the risks that threaten our evolving world. Using both academic knowledge and practical experience, I want to respond to the demands of the present but also to anticipate the complexities of the future.

Experience

RSM - Australia, Security & Privacy

Feb 2025 - Jun 2025

GRC Specialist - Internship

- Managed the different stages of a risk management program, that included identification, risk assessments, risk mitigation planning and risk reporting of Cyber security risks.
- Conducted Cyber security audits to assess an organisation's overall Cyber security maturity and identify critical security gaps and areas for improvement. Where I identified security gaps, I would create fit for purpose remediation steps tailored to the organisation appetite.
- Performed various IT General Controls (ITGC) and IT Application Controls (ITAC) audits.
- Performed data analytics against various large and complex data sets including change logs, application and network user lists.
- Created and facilitated targeted Cyber security awareness training for staff members and executives/privileged users through interactive presentations to

demonstrate psychological triggers that influence decision-making and increase susceptibility to phishing attacks.

BlueSky Lab - Perth, WA

May 2021 - July 2023

Developer - Contractor

- Delivered custom web application solutions for clients using PHP, Composer, and a modular architecture tailored to internal frameworks.
- Built and maintained database interactions via Doctrine DBAL, including schema management, query building, and data persistence.
- Developed and maintained Symfony Console-based command-line tools to automate workflows and support internal systems.
- Ensured all code adhered to PSR-12 standards and followed clean code practices for maintainability and scalability.
- Integrated various open-source libraries such as Twig (templating), Monolog (logging), and PHPUnit (unit testing) into project workflows.
- Collaborated closely with senior developers, project managers, and QA to deliver reliable, production-ready features under tight timelines.
- Contributed to the on-boarding and mentoring of junior developers by documenting internal processes and offering technical guidance.

Crown Towers - Perth, WA

29 Oct 2018 - Current

Guest Service Coordinator - Part-Time

- Managed guest service requests using the hotel's ticketing system (PMS), ensuring all issues, from room upgrades to maintenance needs, were logged, tracked, and resolved efficiently.
- Actively monitored and responded to ticketed service requests connecting, housekeeping, maintenance and room service through the property management system (PMS), ensuring seamless communication between departments.

- Collaborated with IT and operations teams to maintain and troubleshoot ticketing software to ensure smooth operation and minimise system downtime during peak guest service hours.
- Ensured all guest requests were routed to appropriate departments (housekeeping, maintenance, concierge) through the ticketing system, ensuring clear documentation and accountability for resolution.
- Provided technical support for guests experiencing issues with in-room technologies, including Wi-Fi, entertainment systems, and smart room features.
- Analysed ticketing system reports to identify recurring issues, proactively working with relevant departments to address and resolve problems and improve guest satisfaction.
- Tracked and updated ticket statuses in real-time, ensuring all service requests were logged accurately and completed within established time-frames.
- Supported guest relations by using the ticketing system to follow up on resolved issues, ensuring guests were satisfied with solutions and service delivery.
- Trained new team members on the PMS and ticketing system, ensuring effective usage for logging and tracking guest issues and requests.
- Generated regular reports from the ticketing system for management, highlighting trends, service delivery performance, and areas for process improvement.

I.T.I.S Enrico Fermi High School, Lucca, Italy

Aug 2018 - Sep 2020

ICT Systems Support Officer

- Demonstrated skills in problem-solving with a focus on user support and ensuring system reliability.
- Proven experience in help desk and service desk environments, efficiently handling and resolving technical issues.
- Troubleshooted hardware, software, and network problems to minimize downtime.

- Strong cyber-awareness, with demonstrated skills in implementing security best practices to protect systems and data. collaborated, with teams to deliver exceptional service and support.
- Used enterprise IT tools for ticket management, issue tracking, and efficient service delivery.
